Computer Science student with experience in software development, full-stack web applications, process improvement, and collaborative technical projects. Skilled in Java, Python, JavaScript, React, Spring Boot, REST APIs, SQL, Git, and Microsoft Power Platform. Seeking to contribute analytical, problem-solving, and communication skills to a software, systems, or technology-focused team.

EDUCATION

Bachelor of Science (B.S.): Computer Science (GPA: 3.7)

January 2025 - December 2026

North Carolina State University - Raleigh, NC

(Operating System, Network Security, Intro to AI, HCL, Automata, Discrete Math, Java)

Associate in Science (A.S.): Computer Science (GPA: 3.6)

August 2023 - December 2024

Wake Technical Community College - Raleigh, NC

(Honors Program (NCDOT project), Recognized as President's list)

SKILLS

Programming: Java, C, Bash, Python, JavaScript, SQL

ML & AI: Machine Learning, Agentic AI, Algorithm Development, Signal Processing, Optimization

Frameworks & Web: React.js, Spring Boot, REST APIs, Axios, JSON

Microsoft Technologies: Power Apps, Power Automate, Power BI, SharePoint

Tools & Technologies: Git, GitHub, Postman, Jenkins, Eclipse, Figma, Linux/Unix, CLI, Power App,

Testing & Quality: JUnit, Unit Testing, System Testing, Checkstyle, PMD

Soft Skills: Problem Solving, Team Collaboration, Communication, Time Management, Adaptability, Leadership

EXPERIENCE

NetApp - Office of the CIO

May 2026 – Present

Systems, Process, and Reporting Development Intern

- Collaborated with stakeholders to gather business requirements and develop an alternative project portfolio management solution using Power Apps, Power Automate, SharePoint, and Power BI.
- Built functionality for weekly project updates, centralized data tracking, automated notifications, and dashboard reporting; supported data validation, functional testing, stress testing, and user training.

ACADEMIC PROJECTS

WolfCafe Ordering System - NC State University

March 2026 – April 2026

- Developed a full-stack café ordering system using React and Spring Boot, implementing role-based authentication for Admin, Staff, and Customers
- Developed RESTful APIs and integrated frontend with Axios, enabling user management and order processing workflows in a team of 6 developers

CoffeeMaker Project – NC State University

January 2026 - March 2026

- Developed a full-stack CoffeeMaker web portal with a layered architecture, completed all missing features, debugged defects, as well as created web tests.
- Followed industry-style software engineering practices such as GitHub collaboration, Maven build processes, API testing, and the delivery of milestone goals in a team-based setting

PackDoption Application - NC State University

August 2025 - September 2025

- Built a pet adoption management system using Java, designing data structures (queues, lists, iterators) and applying MVC architecture for clean separation of concerns.
- Implemented exception handling for robust performance and GUI components for user interaction.
- Ensured code quality using JUnit tests, system tests, Checkstyle and PMD.

LEADERSHIP ACTIVITIES

- Coordinated an Innovative Ideas Event.
- Hosted multiple events for Dancing and Singing.
- Volunteering Work at Habitat for Humanity.
- Group Discussion leader (Merits and Demerits of AI)
